

JEONGHO BANG

(+82) 10-7551-2820 | bangjeongho833@gmail.com | github.com/BANG-JEONGHO

Education

Kangwon National University

Mar. 2021 – Feb. 2027

B.S., [Artificial Intelligence Convergence](#) · Chuncheon, Korea

- Major gpa: 4.00/4.50 (total: 3.97/4.50)

Internships

iCORE E&C

Jul. 2026 – Aug. 2026

[In-House Platform Development Intern](#) · Seoul, Korea

- Delivered Anti-Gravity training at Daegu Software Meister High School (DSMG).
- Developing a course-specific instructor-matching platform for internal operations.

CVMIP Lab, Kangwon National University (Advisor: Prof. Yoon Kim)

Mar. 2025 – Nov. 2025

[Undergraduate Researcher](#) · Chuncheon, Korea

- Presented paper seminars on BERT masked language modeling and EfficientNet compound scaling.
- Studied attention, backpropagation, CNNs, and Transformers.

Douzone Bizon

Oct. 2025 – Nov. 2025

[Full-Stack Development Intern](#) · Chuncheon, Korea

- Independently developed *Safety Web*, a Kakao Maps service combining Seoul public CCTV data with user-submitted reports, using React, FastAPI, and MySQL.

Project Experience

i-Core Meet — Evidence-Grounded AI Instructor Matching Platform

Jul. 2026 – Aug. 2026

[Team Member \(AI Agent & Backend Developer\)](#) · iCORE E&C, Korea

- Built the full flow that reads a tender document, extracts its requirements, and ranks in-house instructors against them, attaching a supporting quote to every score.
- Scored each instructor two ways — how closely their resume matches in meaning (vector similarity over pre-embedded resumes) and how many required keywords it actually contains — then combined both into one ranking. Only the criteria a given tender asks for enter the calculation, so scores stay comparable across different tenders.
- Checked the AI with code instead of with another AI: a validator confirms that every quoted sentence really appears in the source document and that required certifications are actually held, and fixed rules — not the model — decide the final RECOMMENDED / NEEDS_REVIEW / ON_HOLD status.
- Stored resume embeddings in advance instead of converting them on every request, and reviewed all 20 candidates at once rather than one by one, cutting matching time from about 60 s to 3–5 s.

Munjin Talk Talk — Dialect-Aware AI Clinical Intake Assistant

Mar. 2026 – Jul. 2026

[Team Member \(Speech Recognition & Retrieval Pipeline Developer\)](#) · Kangwon Nat'l Univ., Korea

- Developed a service that lets elderly patients in Gangwon Province complete a spoken pre-consultation intake, automatically converting it into a summary for doctors and a plain-language guide for patients.
- Built a Lexical RAG pipeline on LangGraph: constructed a custom Amazon Transcribe vocabulary from Gangwon dialect data and retrieved the top-8 candidate terms with N-gram matching.

- Resolved recognition failures caused by dialectal verb-ending variation through ending removal and N-gram matching, improving retrieval accuracy (F1) from 0.865 to 0.939.
- Pre-computed the retrieval index and pruned 99.4% of unnecessary candidates at query time, cutting retrieval latency $31\times$ (3.76 ms $\rightarrow$ 0.12 ms) with bit-identical output.

Pet Times — AI Pet Care and Virtual Try-On Platform

Mar. 2026 – Jun. 2026

[Team Member \(AI Virtual Try-On Model Developer\)](#) · Kangwon Nat'l Univ., Korea

- Transferred human Virtual Try-On techniques to the pet domain, addressing the problem that online buyers of pet clothing must rely on product images and third-party reviews.
- Redesigned conventional VTON into a four-stage pipeline — detection $\rightarrow$ segmentation $\rightarrow$ structural conditioning $\rightarrow$ synthesis — to handle quadrupedal posture, fur texture, and must-preserve regions (face, legs).
- Built the Pet-VTON pipeline: DensePose-CSE (animal) embeddings for body orientation and surface geometry, a torso-only wear mask via SAM (excluding head, legs, tail), and IDM-VTON fine-tuned on the pet domain.
- Separated pre-computable components from the pipeline, reducing inference time from 98.7 s to 79.5 s (19.5% faster).

Peace Pass — Gemini-Powered Personalized DMZ Travel Recommendation

Mar. 2026 – Jun. 2026

[Team Leader \(AI / Backend Developer\)](#) · Kangwon Nat'l Univ., Korea

- Led the development of a mobile web service that recommends personalized DMZ travel itineraries based on region, companion type, travel style, and available time.
- Designed a rule-based recommendation engine over 108 attractions, 585 distance records, and nine regions, scoring places by weighted tag-matching and pruning course candidates under per-duration place-count and max-distance constraints.
- Applied nearest-neighbor route ordering, reducing average travel distance by 28.7% versus random visit order (verified on a 745-course benchmark).
- Restricted Gemini 2.5 Flash to generating place-level rationales and travel tips only, keeping itinerary logic deterministic.

Extracurricular Activities

Comento AI Field-Up

Jun. 2026 – Aug. 2026

[Semiconductor Quality Analysis & COA Automation](#) · Kangwon Nat'l Univ., Korea

- Analyzing semiconductor quality data and applying AI to automate Certificate of Analysis generation, identify departments associated with quality issues, interpret nonconformance records, and recommend solutions.

Elice Academy

Jul. 2024 – Aug. 2024

[Data Analysis Bootcamp](#) · Kangwon Nat'l Univ., Korea

- Performed data cleaning, transformation, exploratory data analysis, and visualization using Python, pandas, NumPy, and Seaborn.

Awards and Honors

Top Excellence Award

Jul. 2026

2026 X+AI-SW Convergence Project Competition, SW-Centered University Program, Kangwon National University, Korea

- Received for MunjinTalkTalk, an AI service addressing communication challenges in clinical settings in Gangwon Province.

Encouragement Award

Nov. 2025

2025 Gangwon Province University Student AI Startup Idea Competition, Sangji University RISE Project Group, Korea

- Received for proposing an AI-powered webtoon Korean dictionary.

Departmental Academic Excellence Scholarship

Jul. 2026

Kangwon National University, Korea

Academic Excellence Scholarship

Aug. 2021

Kangwon National University, Korea

Conference

Jeongho Bang, Yugyeong Son, Juwon Kim, Woojoo Kim, Dayoung Lee Jun. 2026
“PET TIMES: An AI-based Integrated Service for Pet Virtual Fitting and Care Scheduling”, The 53rd Korea Computer Congress (KCC 2026), Jeju, Korea – Poster

Skills

Programming	Python, Java
AI	PyTorch, RAG, LangGraph
Data Analysis	pandas, NumPy, Matplotlib, Seaborn, SQL

Certifications

TOPCIT Level 3	Jul. 13, 2026
ADsP	Mar. 13, 2026
SQLD	Mar. 29, 2026
